MobileAccess Joins WiMAX Forum

In-building universal wireless solutions provider MobileAccess has joined the WiMAX Forum, an industry-led non-profit organization committed to promoting and certifying interoperable WiMAX products. MobileAccess, which had earlier announced Mobile WiMAX MIMO support on its Universal Wireless Network, delivers a single, flexible, highly scalable broadband infrastructure for in-building deployments of wireless services.

The WiMAX Forum is dedicated to supporting a standards-based, common platform that fosters rapid innovation of interoperable products. The collaboration promoted through forum membership is designed to drive price and performance levels for new components and services not achievable with proprietary solutions. WiMAX technology is designed to assist service providers across global markets distribute economical broadband data, voice and video services to both residential and business customers.

"As part of the WiMAX Forum, MobileAccess is working with other key industry members to ensure the interoperability of Mobile WiMAX solutions and to cost effectively accelerate the rollout of new networks," said Cathy Zatloukal, CEO of MobileAccess. "The key to the success of Mobile WiMAX will be pervasive in-building support for services and applications. Our goal in joining the WiMAX Forum is to ensure we are working in synch with the industry to deliver high quality, seamless in-building Mobile WiMAX solutions to drive adoption across a myriad of enterprises and venues."
