Sprint Partners Upgrades Enterprise Access

By Wireless Week Staff

Having reliable in-building wireless voice and data applications is no longer a convenience; it is a necessity for increasing corporate productivity and efficiency. That's why Sprint Nextel has partnered with MobileAccess to deliver a universal infrastructure for enterprise's looking for campus-wide access to wireless voice and data applications.

Sprint is leveraging the MobileAccess Universal Wireless Network to provide businesses, such as Hoag Memorial Hospital Presbyterian, with pervasive, multiservice, in-building and campus-wide wireless coverage needed for their mobile applications.

"Businesses demand strong wireless coverage not only for Sprint services, but for all their corporate mobile applications and they want it delivered over one seamless communications infrastructure to simplify network management and enhance productivity of employees," said Darlene Braunschweig, vice president of Custom Network Solutions for Sprint, in a statement. "By working with MobileAccess, we are able to equip our customers with a single scalable, multiservice infrastructure that provides dependable coverage for all of the wireless data and voice services."

At Hoag Memorial Hospital Presbyterian in Newport Beach, Calif., Sprint is using the MobileAccess Universal Wireless Network to provide multiservice wireless coverage throughout the 511-bed acute care facility. With this deployment, Hoag can support voice and data communications over secure cellular and Wi-Fi networks.
